

Week 14 — Final Package Output

Goal

Submit the complete final package with demo proof.

Required Outputs

- ☐ Final source code ZIP or repo link
- ☐ Final documentation pack (this document + README + user guide)
- ☐ Demo video link (2–5 minutes): input → trail → verification → export
- ☐ Final reflection (1 paragraph) included

Evidence to Attach

- ☐ Screenshot: final UI + complete sample trail run
- ☐ Link/file: demo video

Reflection (Write short answers)

- Summarize improvements from Week 1 to Week 14.
- List remaining limitations and suggested future work.

Evidence To Attached

GITHUB REPO

Reflection

Summarize improvements from Week 1 to Week 14.

From Week 1 to Week 14, the project improved from a basic Python implementation into a complete application with a graphical user interface, trail generation, verification features, report exporting, and user-friendly navigation. Additional functions were added to improve accuracy, usability, and documentation. The system became more organized, reliable, and easier to use through continuous testing, debugging, and refinement of both the code and the interface.

List remaining limitations and suggested future work.

The current system still has limitations, including limited support for advanced mathematical functions, dependence on local file storage, and a basic user interface design. Future work may include adding support for more numerical methods, cloud-based data storage, enhanced visualizations and graphs, improved error handling, and cross-platform deployment. Additional features such as user accounts, data synchronization, and customizable reports could further improve the system.
